

Custom Designed Enclosures

Triax enclosures ensure long lasting and efficient protection of distribution and control systems, year after year after year

Brainwork and know-how included

Good thinking has long lasting effects on distribution networks. Cost savings is one of the effects and rational design of enclosures is one of the ways to achieve them.

Since 1968 Triax has been a leading supplier of enclosures for distribution networks and control systems in Europe and the Middle East. Our design engineers have unique experience and knowledge in protecting expensive equipment against extreme temperatures, aggressive atmosphere, dust and vibrations, electronic noise, theft, vandalism and other types of exposure or strain.

The know-how we offer you in the design phase is not just about efficient protection. For years we have cooperated closely with installers and network operators on enclosure designs that facilitate system access and maintenance.

Ask the specialists, when you want enclosure designs with practical and lasting benefits.

Ask Triax.

Frostproof and absolutely tight to drifting snow. Those are some of the requirements fulfilled by Triax enclosures mounted in Iceland.

In enclosures packed with electronic equipment temperatures can rise to damaging levels.

Middle East temperatures require efficient cooling and ventilation systems. Triax has developed solutions to ensure control of temperatures.

Flexible enclosures tailored to requirements

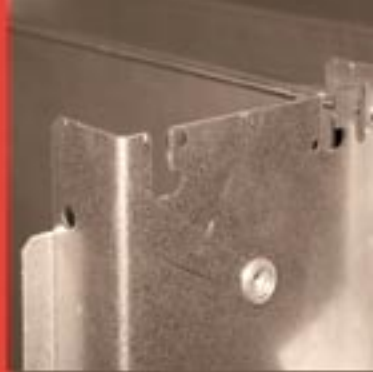

A lot of flexibility is needed to supply enclosures covering a wide range of applications and customer requirements, with differences in product as well as in logistics demands.

Triax's manufacturing lines are designed to combine flexibility with the economic advantages of industrial and highly automated manufacturing. In flexible manufacturing cells we produce dozens of units with almost the same efficiency as thousands of units.

Our coating plant individualizes surface treatment according to specifications agreed with each customer. With efficient logistics systems, including a computer controlled warehouse, we handle complex delivery schemes and ensure that you get the right product, at the right time and place.

Triax supplies enclosures for:

- Telecommunication, cable television and optical fibre networks
- Gas and electricity distribution systems
- Traffic and railway regulation systems
- Security and closed-circuit TV-systems
 - Pump control units in water distribution systems
- Industrial automation systems

Enclosures are manufactured in stainless steel or in high grade galvanized steel.

Our flexible manufacturing cells are designed for rational manufacturing of both dozens and thousands of units.

Triax's coating plants comprise polyester and Rilsan coating. Polyester coating is applied in a 10-step process and protects the enclosure with a perfect and strong surface.

Partnerships based on reliability

Triax customers include some of Europe's major network operators, and some have been customers for more than 20 years.

Also new customers have recently trusted us to supply them efficiently in large and demanding infrastructure projects.

Absolute reliability is our basis for developing long lasting and growing relationships with our customers.

Our choice of materials and processing is based on extensive knowledge of year-after-year performance of enclosures in every possible environment. Each product and process is tested individually to ensure quality according to agreed specifications.

Reliability and predictability of course also includes quality in design and distribution. We keep our promises and act quickly and flexibly, when our customers need an extraordinary effort.

Just ask for references, or read the "case stories" from some of the different projects.

Triax is ISO certified and has been since 1993. Quality management procedures are controlled in regular audits.

Complex delivery schemes are handled precisely from our computer controlled warehouse

Coating is vital to protection of enclosures. The quality of Triax's coating processes is continuously checked.

Thinking one step ahead...

Triax philosophy is customer-orientation: In both our markets, TV-systems and enclosures, our objective is to save time and trouble for the installers, operators and distributors building their business on our products.

Simplicity and support are key words, expressed both in products and in service.

Our products offer more in performance and simplifying logic, and in our support customers have easy access to understandable, useful and competent answers.

Innovative thinking, service-oriented people and advanced technology has made Triax one of the leading European suppliers of both TV-systems and enclosures.

We offer everything that can be expected from a professional supplier within these fields.

Triax is of course ISO 9001 certified and delivers products in accordance with all acknowledged local and international quality standards.
